Java JTable MySQL – INSERT SELECT UPDATE DELETE

This is a java jtable mysql database tutorial.

Hello good people. We tackle Java JTable and MySQL Database. We see how to perform all CRUD operations: INSERT, SELECT, UPDATE and CLEAR. Welcome.

SECTION 1 : Our Tools

1. Netbeans IDE

2. MySQL Database.I have used Wamp Server's PhpMyAdmin's interface to create database and table.The choice is yours.

SECTION 2 : Our Database Class.

Purpose:

1. Connect to our MySQL Database
2. Perform for us all CRUD operations,insert,select,update and delete.

```
package jtable.db;

import java.sql.Connection;
import java.sql.DriverManager;
import java.sql.ResultSet;
import java.sql.SQLException;
import java.sql.Statement;

import javax.swing.table.DefaultTableModel;

public class DBUpdater {

    String conString = "jdbc:mysql://localhost:3306/playersdb";
    String username = "root";
    String password = "";

    //INSERT INTO DB
    public Boolean add(String name, String pos, String
```

SECTION 3 : Our GUI class

Purpose:

1. Provide GUI interface to facilitate inserting, updating, retrieving and deleting.
2. Talk to Database class to get these operations done, in turn receiving a defaultTableModel instance.

```

        .addGroup(jPanel1, javax.swing.GroupLayout.DEFAULT_SIZE, Short.MAX_VALUE)
    }

    public void initComponents() {
        setDefaultCloseOperation(javax.swing.WindowConstants.EXIT_ON_CLOSE);
        setTitle("JTable MySQL");
        javax.swing.GroupLayout layout = new javax.swing.GroupLayout(this);
        this.setLayout(layout);
        layout.setHorizontalGroup(
            layout.createParallelGroup(javax.swing.GroupLayout.Alignment.LEADING)
                .addGroup(layout.createSequentialGroup()
                    .addContainerGap()
                    .addComponent(jPanel1, javax.swing.GroupLayout.DEFAULT_SIZE, Short.MAX_VALUE)
                    .addContainerGap())
        );
        layout.setVerticalGroup(
            layout.createParallelGroup(javax.swing.GroupLayout.Alignment.LEADING)
                .addGroup(layout.createSequentialGroup()
                    .addContainerGap()
                    .addComponent(jPanel1, javax.swing.GroupLayout.DEFAULT_SIZE, Short.MAX_VALUE)
                    .addContainerGap())
        );
    }
}

```

[/embedyt])(<http://www.youtube.com/watch?v=B07lLpsqARw>[/embedyt])

SECTION 3 : Our Main class

Purpose:

1. Entry point to our application.
2. Start off GUI.

```

package jtable.db;

public class JTableDB {

```

```
//MAIN CLASS
    public static void main(String[] args) {
        //CALL UPDATER CLASS WHICH IS OUR GUI CLASS
        new Updater().setVisible(true);
    }
}
```

Best Regards.
